

Sensory Circuits/PE

This term, we will focus on more PE skills during our daily afternoon sessions in preparation for our 'Activity Afternoon' in Term 6. We will master skills of crawling, balancing, throwing and catching in different activities. In the mornings, we will engage in our Sensory Circuits session, developing our confidence in using the equipment that helps us to regulate.

Phonics and Reading

Everyone will have reading and phonics tasks appropriate to their learning needs. Whether this is segmenting and blending CVC words, learning new diagraphs or applying phonics skills to create sentences which narrate a story.

Honey Bees
Term 5

14.4.26-22.5.26

Value of the Term – Compassion

English

In English, we will be sharing some more 'Tim Hopgood' stories together. We will begin to think about some of the common time connectives to describe the order that we meet the different characters and describe them with simple adjectives.

Maths

Maths will continue to develop the pupils' understanding of number. Some children will be learning how to count accurately, others will develop their understanding of addition and then explore subtraction and word problems. Other children will explore multiplication in groups of two.

Forest School

Jo will be with us again for our Forest School sessions. We will be exploring the different trees and leaves that we find in our Forest School and watching our newts grow.

PSHE

We will be developing our play skills and sharing these skills with our fellow class members. We will also be developing our understanding of taking turns and waiting until it is time to use a resource or activity.

Outside Learning

As the weather gets warmer, we will be spending more time outside, listening to stories, playing games, engaging in sensory activities that need more space and exploring the natural things that we find in our outside areas.
